## **INTRODUCTION**

---

## **1.1 ORGANIZATION PROFILE**

Ocean Infotech is an offshore software development company, serving in the industry since six years, employs a team of IT outsourcing and business professionals. We have obtained unique experience and built a very strong team of offshore web and software developers and managers. We have core expertise on LAMP, PHP, ASP and .NET, AJAX platform.

Ocean Infotech Pvt. Ltd. is committed to innovative cutting-edge I.T. solutions. Managed by young professionals having varied experience, it is a focused group of technocrats whose primary objective is to provide high quality appropriate technology solutions at competitive price. Fusion is proactively working on emerging technologies to provide the “right” solutions to meet your current, as well as future needs.

Ocean has shown a consistent record of dynamic growth since its inception and is today a multi-location Company.

Ocean is a technology intensive corporation geared to deliver state-of-the-art solutions in areas of integrated business solutions, product development, Internet / Intranet applications, e-commerce / m-commerce services.

Ocean emphasizes a strong belief in people, entrepreneurship, customer orientation, and the pursuit of excellence. This has resulted in the creation of an internal culture where new ideas are constantly nurtured and acted upon, and new competencies developed, enabling Fusion to be a IT courtesy of yours esteemed organisation.

Ocean works as a network/team. We are truly dedicated in web-development and software development. Our mission is to fulfill our client's needs.

Ocean's ideas and products have resulted in technology-intensive transformations that have met the most stringent of quality standards, which add values to your existing business at competitive rates.

Ocean offers high value services that assist companies to compete in a constantly changing environment. Our professional staff works closely with companies to identify opportunities for improving business processes, quality, and business efficiency. Fusion will manage your project, act as liaison between your thoughts and your company goals and ensure that the outcome matches your needs and expectations. By careful analysis and alignment of your needs and strategic business goals, Fusion is able to maximize benefits and the return on your investment.

We offer a broad range of IT consulting and custom programming services. We have significant experience satisfying the most special technical needs of our customers. We understand the importance of a balanced technical design. We apply the appropriate level of technology to each project, keeping smaller projects simple and larger projects robust.

Our clients represent a broad cross-section of businesses. We are very proud of the relationships we have built, and we have earned them through listening, learning, and communicating with our clients.

For businesses, one size does not fit all... That's the whole idea behind Ocean's approach to custom software development. Every business has its own business model, culture and needs. Thus Ocean can create a software solution specifically for your business needs.

We employ the latest project management techniques and software engineering practices to ensure the timely, error-free delivery of software applications that are highly scalable without loss of performance. Our dedication to quality and excellence allows the creation of software with high levels of security. Let Fusion to be a IT courtesy for your business.

## **1.2 PROJECT DETAIL**

### **1.2.1 Project Definition**

Matrimonial Web Application.

#### **What is Matrimonial Web Application?**

The main objective of Matrimonial Web Application is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner. Keeping our objective in mind, we have created a world renowned online matchmaking services that will touch the souls of millions of people all over the globe.

#### **The purposes of the Matrimonial Web Application are:**

- The main purpose of this application is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “Bride” or “Groom” and other information regarding them online.
- User can get information regarding their dream life partner at his/her home at his/her convenience.
- This application also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.
- Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

Matrimonial Web Application will allow a new user to register and after successfully registration user can get email confirmation, after completing registration users profile will be visible to other users.

Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match. There are different sectors like Registration, Partner, Search, etc. So the Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria. The Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfill their required criteria.

**For This Application, we will provide following capabilities:**

- (1) Admin Module.
- (2) User Registration Module
- (3) Image Uploading module
- (4) Creating album
- (5) Sending Express Interest
- (6) Sending Personal messages
- (7) Marriage Loan
- (8) Paid Membership
- (9) Search Module.
- (10) Quick Tour.
- (11) Directory.

Considering the security and privacy aspects, Matrimonial Web Application will use HTTPS protocol (A version of the HTTP protocol that includes data encryption for security.)

The application will have to be completed using Visual Studio 2005 and SQL Server 2005 with help of other office productivity tools such as (Microsoft Front page 2003, Microsoft Visio 2003, Microsoft Project 2003 etc.)

The application testing criteria and installation requirements will be part of the detailed application architecture document.

### **1.2.2 About Project**

#### **Project profile**

<b>Company Name</b>	: FUSION INFORMATICS PVT. LTD.
<b>Website</b>	: <a href="http://www.fusioninformatics.com">www.fusioninformatics.com</a>
<b>Project Title</b>	: Matrimonial Web Application.
<b>Objective Of System</b>	: Matrimonial Web Application will allow a new user to register and after successfully registration user can get email confirmation, after completing registration users profile will be visible to other users.
<b>Operating Systems</b>	: Microsoft Windows XP Professional With SP2
<b>Hardware Requirement</b>	: Pentium 90 MHZ or Faster and 96 MB Ram (Client) Pentium 133 MHZ or Faster and 128 Ram (Server)
<b>Software Requirement</b>	: Microsoft Visual Studio .Net
<b>Front End</b>	: Microsoft Visual Studio Asp.Net
<b>Back End</b>	: Microsoft SQL Server
<b>Others</b>	: <ul style="list-style-type: none"><li>• Microsoft Visio</li><li>• .Net Framework</li></ul>
<b>Guided By</b>	: Director: Mr. Dhaval Shah

### **1.3 PURPOSE**

Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match. There are different sectors like Registration, Partner , Search, etc. So the

Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria. The Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfill their required criteria.

**The purposes of the Matrimonial Web Application are:**

- The main purpose of this application is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “Bride” and “Groom” and other information regarding them online.
- User can get information regarding their dream life partner at his/her home at his/her convenience.
- This application also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.
- Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

## **1.4 SCOPE**

- Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match.
- There are different sectors like Registration, Partner , Search, etc. So the Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria.
- The Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfill their required criteria.

## **1.5 OBJECTIVE**

### **What is Matrimonial Web Application?**

The main objective of Matrimonial Web Application is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner. Keeping our objective in mind, we have created a world renowned online matchmaking services that will touch the souls of millions of people all over the globe.

### **What are the purposes of Matrimonial Web Application?**

The purposes of the Matrimonial Web Application are:

- The main purpose of this application is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “bride” or “groom” and other information regarding them online.

- User can get information regarding their dream life partner at his/her home at his/her convenience.

- This application also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.

Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

## **1.6 TECHNOLOGY AND LITERATURE REVIEW**

<b>Operating System</b>	Window-xp
<b>Technology</b>	.Net 2005 with 2.0 architecture
<b>Language</b>	Asp.net
<b>Database</b>	MS-SQL 2005 server

**Table 1.1 Technology and OS**

### **1.6.1 The .net framework**

A frame work is commonly thought of as a set of class libraries that aid in the development of applications. The .net framework is more than just a set of classes. The .net framework is targeted by compilers using a wide variety of applications. Including everything from small components that run on handheld devices to large Microsoft ASP.NET application that span web farms, where multiple web servers act together to improve the performance fault tolerance of a web site. The .NET framework is responsible for providing a basic platform that these applications can share. This basic platform includes a runtimes set of services that oversee the execution of applications. A key responsibility of the runtime is to manage execution so that software written by different programming languages uses classes and other types safely.

### **1.6.2 Microsoft .net framework architecture**

Microsoft's .NET Framework is comprised of two main components - the Common Language Runtime (CLR) and the .NET Framework class libraries. The CLR is the real foundation of the .NET Framework. It is the execution engine for all .NET applications. Every target computer requires the CLR to successfully run a .NET application that uses the .NET Framework. The main features of CLR include:

- Automatic Memory Management
- Thread Management
- Code Compilation & Execution
- Code Verification
- High level of security
- Remoting
- Structured Exception Handling
- Interoperability between Managed and Unmanaged code.

- Integration with Microsoft Office System

All .NET applications are compiled into Intermediate Language code (MSIL). When executed on the CLR, MSIL is converted into native machine code specific to the operating platform. This process is done by a Just in Time (JIT) compiler. The code executed by the CLR is called as Managed Code. This code is type safe and thoroughly checked by the CLR before being deployed. The .NET runtime also provides a facility to incorporate existing COM components and DLL's into a .NET application. Code that is not controlled by the CLR is called Unmanaged Code.

The .NET Framework is further comprised of Common Type System (CTS) and Common Language Specification (CLS). The CTS defines the common data types used by .NET programming languages. The CTS tells you how to represent characters and numbers in a program. The CLS represents the guidelines defined by for the .NET Framework. These specifications are normally used by the compiler developers and are available for all languages, which target the .NET Framework.

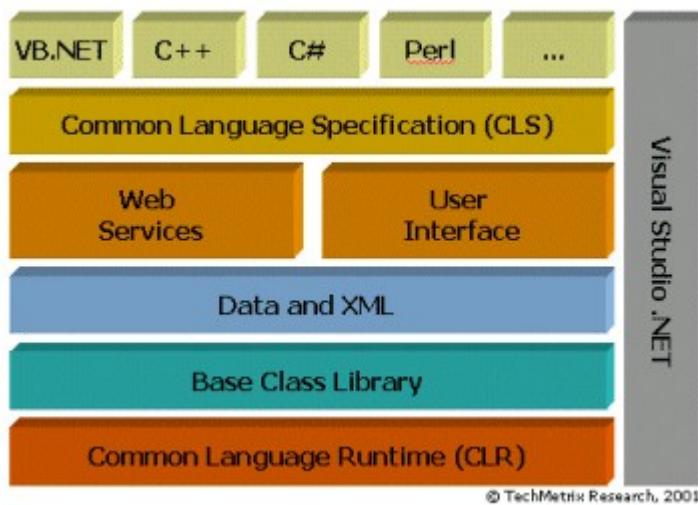

Fig 1.1 .Net architecture

### 1.6.3 Common Language Specification

To fully interact with other objects regardless of the language they were implemented in, objects must expose to callers only those features that are common to all the languages they must interoperate with. For this reason, the Common Language Specification (CLS), which is a set of basic language features needed by many applications, has been defined. The CLS rules define a subset of the Common Type System; that is, all the rules that apply to the common type system apply to the CLS, except where stricter rules are defined in the CLS. The CLS helps enhance and ensure language interoperability by defining a set of features that developer can rely on to be available in a wide variety of languages. The CLS also establishes requirements for CLS compliance; these help you determine whether your managed code conforms to the CLS and to what extent a given tool supports the development of managed code that uses CLS features.

If your component uses only CLS features in the API that it exposes to other code (including derived classes), the component is guaranteed to be accessible from any programming language that supports the CLS. Components that adhere to the CLS rules and use only the features included in the CLS are said to be CLS-compliant components.

The CLS was designed to be large enough to include the language constructs that are commonly needed by developers, yet small enough that most languages are able to support it. In addition, any language constructs that makes it impossible to rapidly verify the type safety of code was excluded from the CLS so that all CLS-compliant languages can produce verifiable code if they choose to do so

#### 1.6.4 Common Language Runtime

The Common Language Runtime (CLR) is the virtual machine component of Microsoft's .NET initiative. It is Microsoft's implementation of the Common Language Infrastructure (CLI) standard, which defines an execution environment for program code. The CLR runs a form of byte code called the Microsoft Intermediate Language (MSIL), Microsoft's implementation of the Common Intermediate Language.

Developers using the CLR write code in a high level language such as C# or VB.Net. At compile-time, a .NET compiler converts such code into MSIL (Microsoft Intermediate Language) code. At runtime, the CLR's just-in-time compiler (JIT compiler) converts the MSIL code into code native to the operating system. Alternatively, the MSIL code can be compiled to native code in a separate step prior to runtime. This speeds up all later runs of the software as the MSIL-to-native compilation is no longer necessary.

Although some other implementations of the Common Language Infrastructure run on non-Windows operating systems, the CLR runs on Microsoft Windows operating systems.

The virtual machine aspect of the CLR allows programmers to ignore many details of the specific CPU that will execute the program. The CLR also provides other important services, including the following:

- Memory management
- Thread management
- Exception handling
- Garbage collection
- Security

### 1.6.5 Introduction to ASP.NET

Although so Microsoft Visual Basic.NET is a powerful but simple language aimed primarily at developers creating web applications for the Microsoft .NET platform. It inherits many of the best features of C++ and Microsoft Visual Basic, but with some of the inconsistencies and anachronisms removed, resulting in cleaner and logical language. VB also contains a variety of useful new innovations that accelerate application development, especially when used in conjunction with Microsoft Visual Studio .NET.

The Common Language Runtime provides the services that are needed for executing any application that's developed with one of the .NET languages. This is possible because all of the .NET languages compile to a common Intermediate Language. The CLR also provides the common type system that defines the data types that are used by all the .Net languages. That way, you can use same data types regardless of what .NET language you're using to develop your application. plementations.

**ASP.NET:** Microsoft, realizing that ASP does possess some significant shortcomings, developed ASP.net. ASP.net is a set of components that provide developers with a framework with which to implement complex functionality. Two of the major improvements of ASP.net over traditional ASP are scalability and availability. ASP.net is scalable in that it provides state services that can be utilized to manage session variables across multiple web services in a server farm. Additionally, ASP.net possesses a high performance process model that can detect application failures and recover from them. We use the fundamentals of programming with VB using Visual Studio .NET and .NET framework.

The project is the starting point for authoring applications, components & services in Visual Studio.NET 2005. It acts as a container that manages your source code, data connections & references. A project is organized as part of a solution, which can contain multiple projects that are independent of each other. C# project file has .asproj extension whereas solution file has .sln extension.

In order to write code against an external component, your project must first contain a reference to it. A reference can be made to the following types of component.

- (1) .NET class libraries or assemblies
- (2) COM components
- (3) Other class libraries of projects in the same solution
- (4) XML web services

### **Features of ASP.NET:**

- (1) Component Infrastructure.
- (2) Language Integration.
- (3) Internet Interoperation.
- (4) Simple Development.
- (5) Simple Deployment.
- (6) Reliability.
- (7) Security

#### **1.6.6 Introduction to Micro Soft SQL Server**

Microsoft SQL Server enhances the performance, reliability, and scalability provided by earlier releases of SQL Server by making the processes of developing applications, managing systems, and replicating data easier than ever.

All of data processing is involved with the operations of storing and retrieving data. A database, such as Microsoft SQL Server, is designed as the central repository for all the data of an organization. The crucial nature of data to any organization underlines the importance of the method used to store it and enable its later retrieval.

Microsoft SQL Server uses features similar to those found in other databases and some features that are unique. Most of these additional features are made possible by SQL Server's tight integration with the Windows NT operating system. SQL Server

contains the data storage options and the capability to store and process the same volume of data as a mainframe or minicomputer.

Like most mainframe or minicomputer databases, SQL Server is a Database that has seen an evolution from its introduction in the mid-1960s until today. Microsoft's SQL Server is founded in the mature and powerful relational model, currently the preferred model for data storage and retrieval.

Unlike mainframe and minicomputer databases, a server database is accessed by users-- called clients--from other computer systems rather than from input/output devices, such as terminals. Mechanisms must be in place for SQL Server to solve problems that arise from the access of data from perhaps Hundreds of computer systems, each of which can process portions of the database independently from the data on the server. Within the framework of a client/server database, a server database also requires integration with communication components of the server in order to enable connections with client systems.

SQL server also contains many of the front-end tools of PC databases that traditionally haven't been available as part of either mainframe or minicomputer databases. In addition to using a dialect of Structured Query Language (SQL), GUI applications can be used fro the storage, retrieval, and administration of the database.

## **Chapter 2**

### **ABOUT THE SYSTEM**

---

## 2.1 ABOUT MATRIMONIAL WEB APPLICATION

The main objective of Matrimonial Web Application is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner. Keeping our objective in mind, we have created a world renowned online matchmaking services that will touch the souls of millions of people all over the globe.

- The main purpose of this application is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “Bride” or “Groom” and other information regarding them online.
- User can get information regarding their dream life partner at his/her home at his/her convenience.
- This application also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.
- Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

Matrimonial Web Application will allow a new user to register and after successfully registration user can get email confirmation, after completing registration users profile will be visible to other users.

Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match. There are different sectors like Registration, Partner , Search, etc. So the Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria. The Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfill their required criteria.

**For This Application, we will provide following capabilities:**

**(a) Admin Module.**

The main functions of admin of are as mentioned below.

- 1) Login
- 2) Report generation
  - Report of all members
  - Report of free members and paid members
  - User management
- 3) Logout

**(b) User Registration Module.**

In this module when user fill-ups first three registration form user will get a member id and will also get conformation message on his/her Email id.

After getting member id user will use his/her member id to login, and user can modify his/her profile, fill-up remaining form of registration, image upload, create album .

**(c) Image Uploading module.**

User can change his/her photo, Image uploading is done after registration only, so user must have member id for image uploading.

**(d) Creating album.**

User can create album.

**(e) Search Module.**

This five types of search available for user..

- Advance Search,
- Quick Search,
- Search by City,
- Search by Id,
- Search by Profession,

**(f) Sending Express Interest.**

Here after searching the profile user can send a express interest to a profile of his liking .The messages here will be pre-defined here .

**(g) Sending Personal messages.**

Here after searching the profile user can send a Personal Message to a profile of his liking .For this functionality user must be a paid member.

**(h) Marriage Loan.**

Here user can apply for marriage loan .For this to happen user have to fill up the form for loan specifying his need for loan and loan amount .

**(i) Paid Membership.**

Some of the facilities can only be done by only paid members .And they are like Send a personal message ,viewing album of user, viewing contact information.

**(j) Profile Management Module.**

After login user will be redirected to the page containing his information .User can edit ,update and delete the profile if no longer he wants to retain it .

**(k) Quick Tour.**

This is a module that contains the flow of the website .Here user can have a idea how he can commit himself in the website.

**(l) Directory.**

This is a module that contains the details like hotels, beauticians .Here user can have best options for appropriate category to chose among them.

## **2.2 FEASIBILITY STUDY**

Feasibility study is a process to check possibilities of system development. It is a method to check various different requirements and availability of financial & technical resources.

Before starting the process various parameters must be checked like:

- Estimated finance is there or not?
- The man power to operate the system is there or not?
- The man power is trained or not?

All the above conditions must be satisfied to start the project. This is why in depth analysis of feasibility is carried out.

There are three different ways feasibility can be tested

- 1) Economical Feasibility
- 2) Technical Feasibility
- 3) Operational Feasibility.

### **2.2.1 Economical Feasibility:**

In economical feasibility, analysis of the cost of the system is carried out. The system should be only developed if it is going to give returned the current manual system user can get the price only by purchasing the newspapers. In addition if he/she wants to see archives of particular equity then he has to refer to all the old newspapers. For research reports he has to buy another magazine. So Instead of buying no of magazines user has to just go online and with a single click he can get whatever information he wants. So our project of online share news passes the test of economical feasibility.

### **2.2.2 Technical Feasibility:**

It is basically used to see existing computer, hardware and software etc, weather it is sufficient or additional equipments are required? Minimum System Requirement is such that it can be affordable by of the user who is having computer. All the user requires is compatible browser and .net framework installed so our system is fully technical feasible.

### **2.2.3 Operational Feasibility:**

Once the system is designed there must be trained and expert operator. If there are not trained they should given training according to the needs of the system.

From the user's perspective our system fully operational feasible as it just requires some knowledge of computer. Operators only need add daily prices of various equities and there are enough validations available so operator does not require any special technical knowledge. So our system also passes the test of operational feasibility.

## **2.3 SOFTWARE MATRICES**

### **2.3.1 Estimation:-**

In Web engineering, the metrics have three goals:

1	To provide the indication of the quality from the technical point of view.
2	To provide the basis for effort estimation.
3	To provide an indication of the success from the business point of view.

### **2.3.2 Application Authoring And Design Tool :-**

<b>Suggested measure</b>	<b>Description</b>
Structuring effort	Time to structure Web App and/or device architecture.
Interlinking effort	Time to interlink pages to build the Apps.
Interfacing planning	Time taken to plan Web Application Interface.
Interface building	Time taken to implement Web Application interface.
Link-testing effort	Time taken to test all links in Web Application
Media-testing effort	Time taken to test all media in Web Application.
Total effort	Structuring effort + Interlinking effort + Interface Planning + Interface Building

## PAGE AUTHORIZING

Text effort	Time taken to author or reuse text in Page.
Page-linking effort	Time taken to author links in page. Time taken to structure page.
Total page effort	Text effort + Page-linking effort + Page structuring effort

## MEDIA AUTHORIZING

Media Effort	Time taken to author or re-use media files.
Media-digitizing effect	Time taken to digitize media.
Total Media Effort	Media Effort + Media-digitizing effort.

## PROGRAM AUTHORIZING

Programming effort	Time taken to author HTML, PHP or language implementations.
Re-use effort	Time to reuse / modify existing.

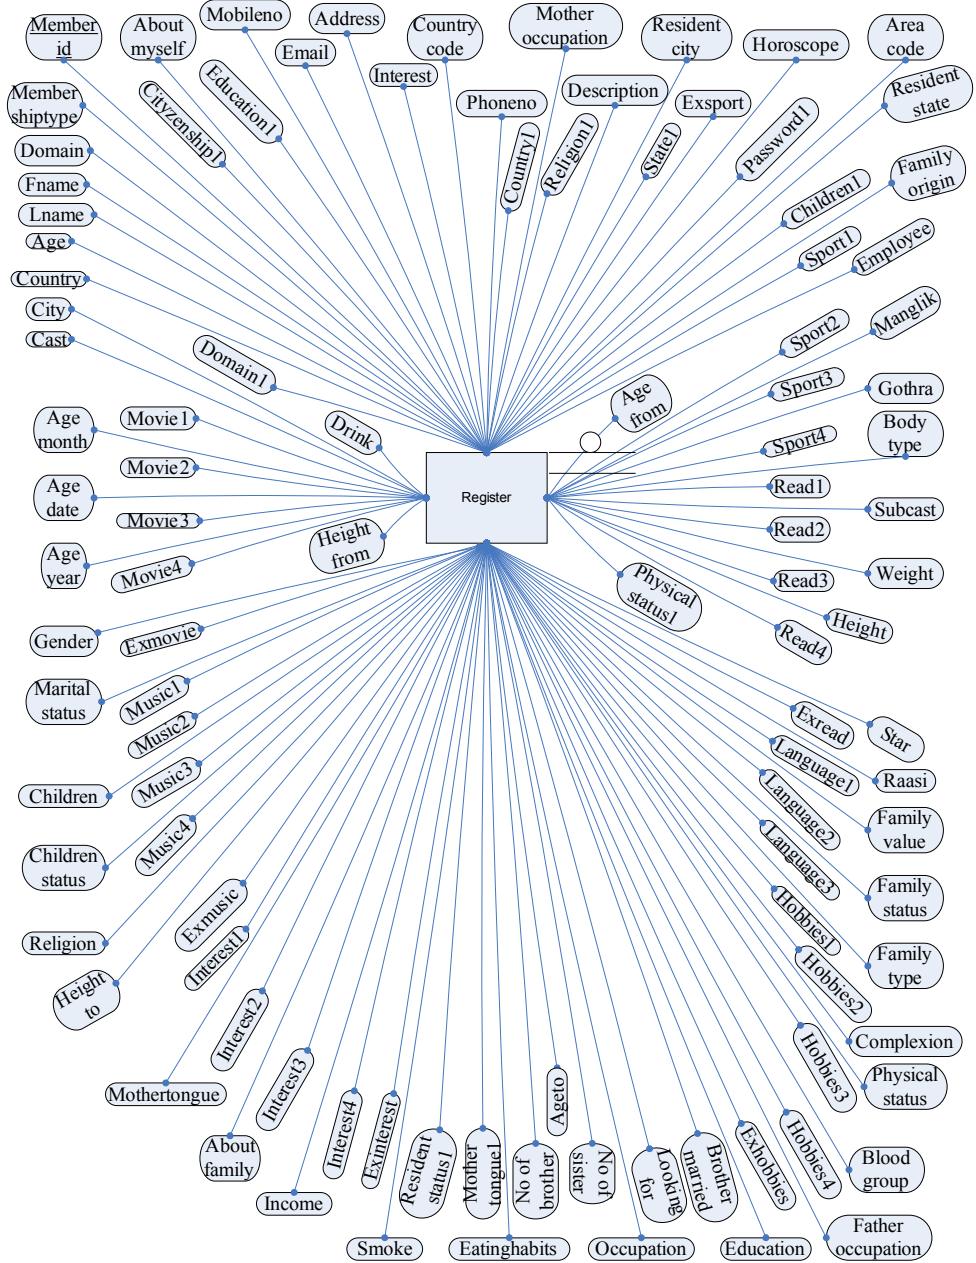

### 2.3.3 Calculation :-

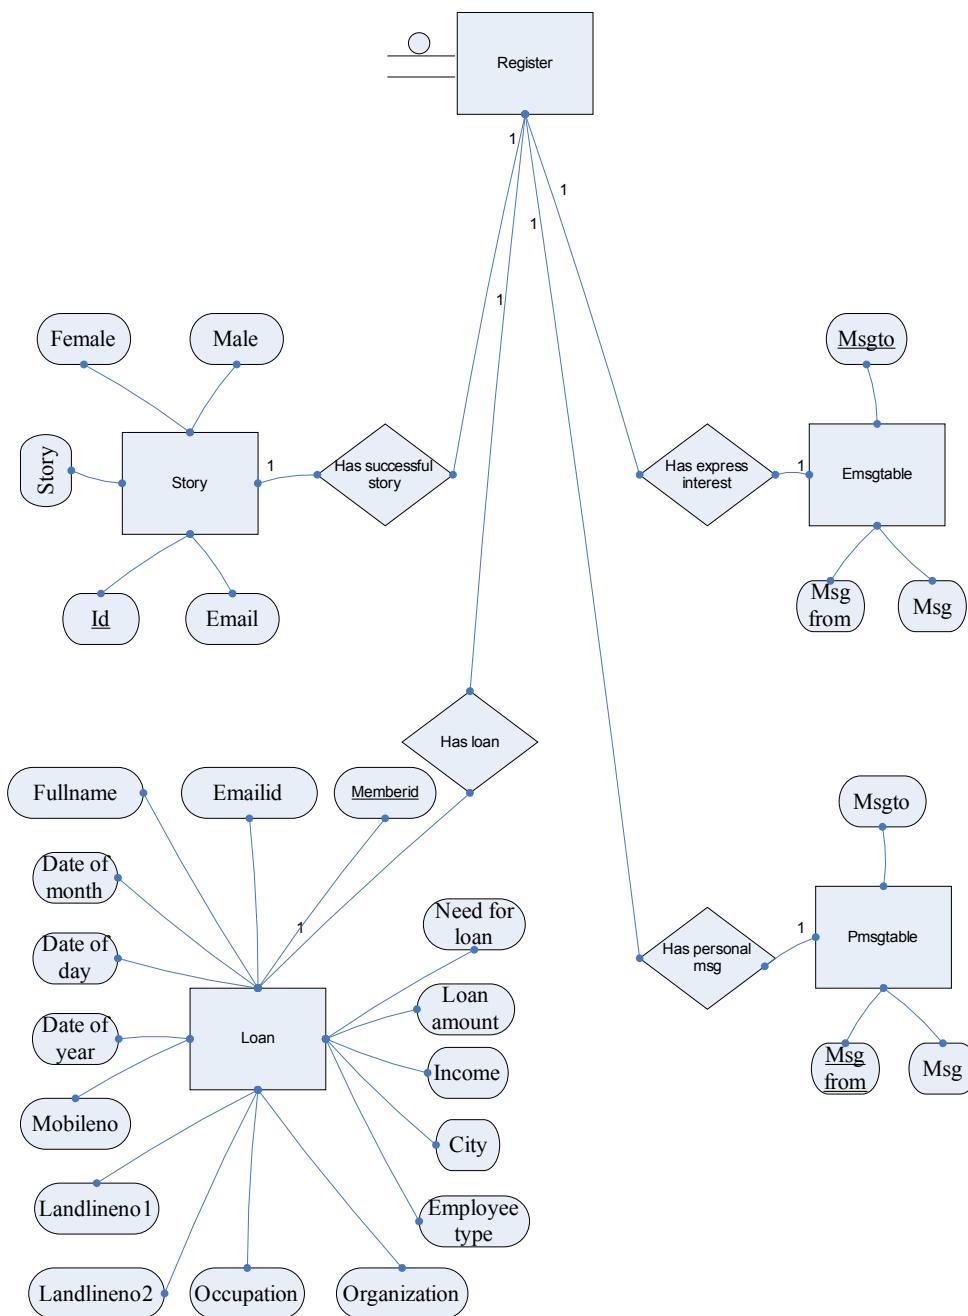

Structuring effort	6-PDay
Interfacing planning	3-PDay
Interlinking effort	3-PDay
Interface Building	6-PDay
Link-testing effort	3-PDay
Media-testing effort	3-PDay
Total Effort	$(6+3+3+6+3+3)=24\text{-PDay}$
Text Effort	6-PDay
Page-linking effort	4-PDay
Page structuring effort	6-PDay
Total Page Effort	$(6+4+6)\text{days}=16\text{-PDay}$
Programming Effort	40-PDay
Reuse effort	10-PDay

## ANALYSIS

---

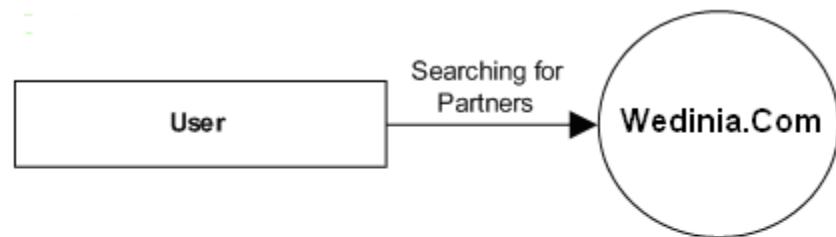

### 3.1 E-R DIAGRAM

## 3.2 DATA FLOW DIAGRAM

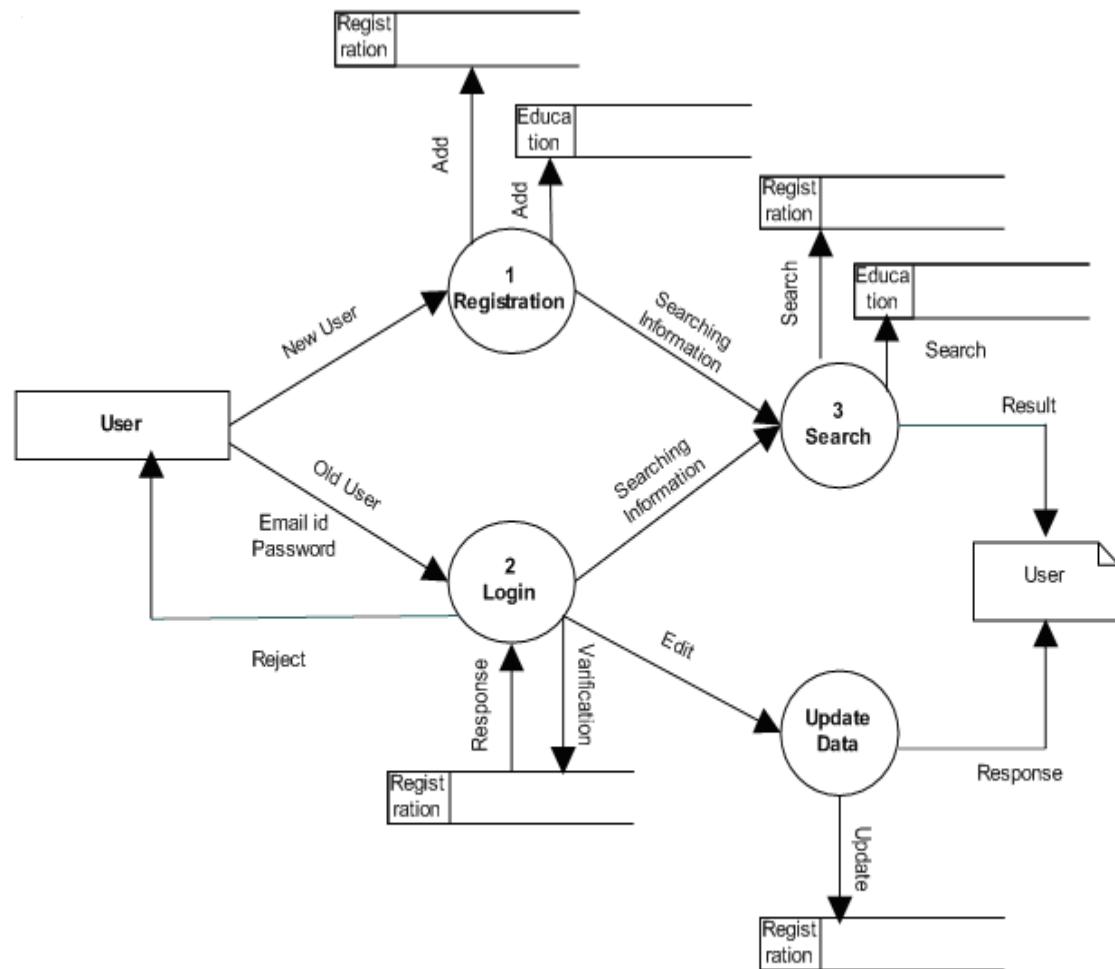

### 3.2.1 Level 0

Context Diagram

### 3.2.2 Level 1

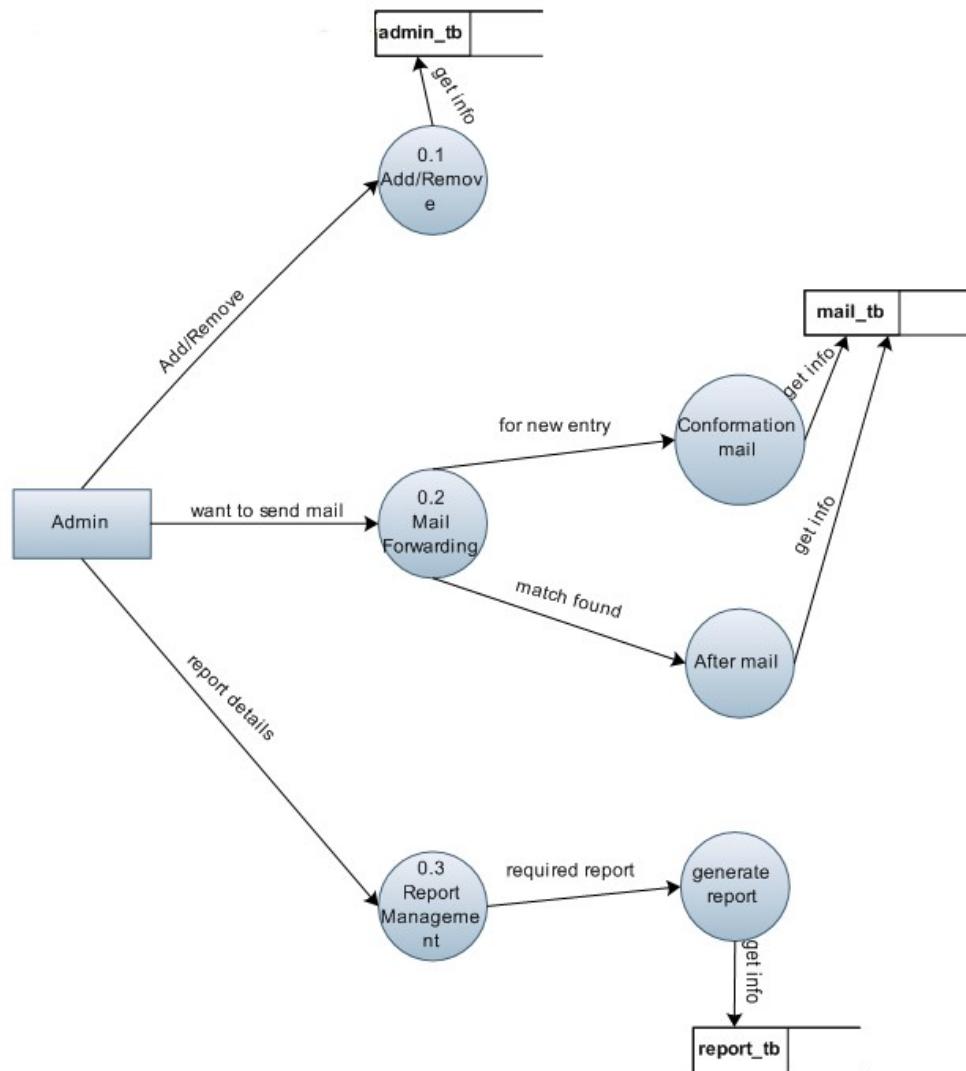

#### 3.2.2.1 Data Flow Diagram For User

Level 1: Data Flow Diagram

### 3.2.3 Level 1

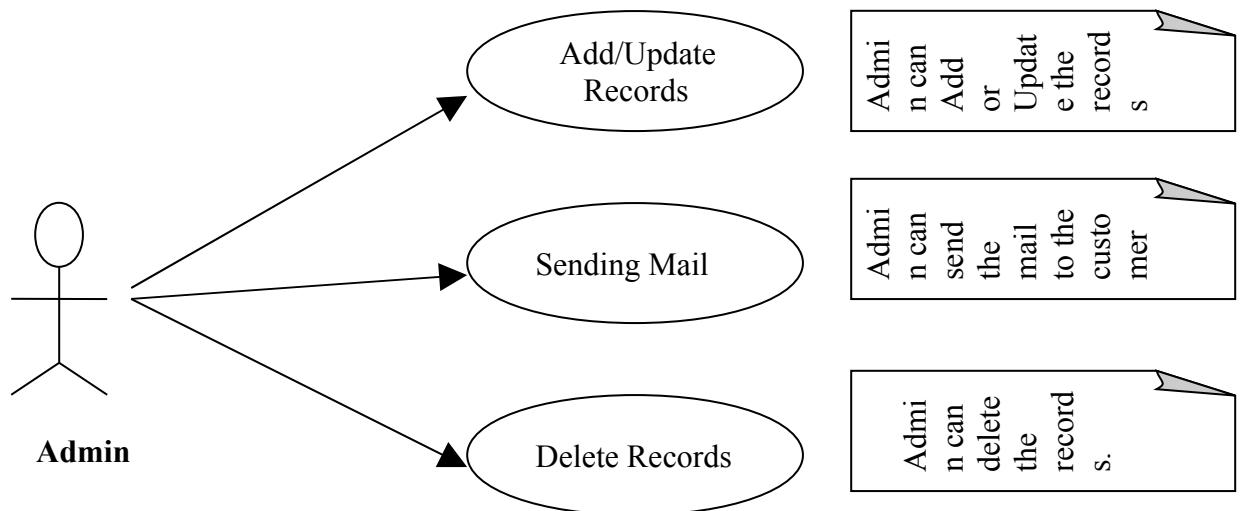

#### 3.2.2 1 Data Flow Diagram For Admin

ADMIN DATA FLOW DIAGRAM

### 3.3 USE CASE DIAGRAM

#### 3.3.1 Admin Use Case :-

## 1.0 Use case Name

Admin

### 1.1 Basic Flow

Admin starts this use case. It provides the capability for the admin to verify different procedures. He can perform various types of operations like edit, update, delete, sending the mail etc.

## **2.0 Flow of Events**

### **2.1 Basic Flow**

Admin perform the four main activity like store the information of the customer, sending the mail to the customer, searching for perfect matching etc.

Customer Information:-

The admin maintain the information about the customer in the database whenever he/she fill up the form.

Sending the mail:-

The admin will send the email to the customer according to its requirement for male/female. He will also send the mail if any new thing is introduce in our system.

Add/Update/Delete records:-

The admin can add, update or delete the records in the database.

### **2.2 Alternate Flows**

#### **2.2.1 Invalid Password**

An invalid password is entered. The user can re-enter a password or terminate the use case.

#### **2.2.2 Invalid Username:**

The system informs the user that the username is invalid. The user can re-enter the username or terminate the use case.

### **3.0 Special Requirements**

There are no special requirements for this use case.

### **4.0 Preconditions**

There are no special requirements for this use case.

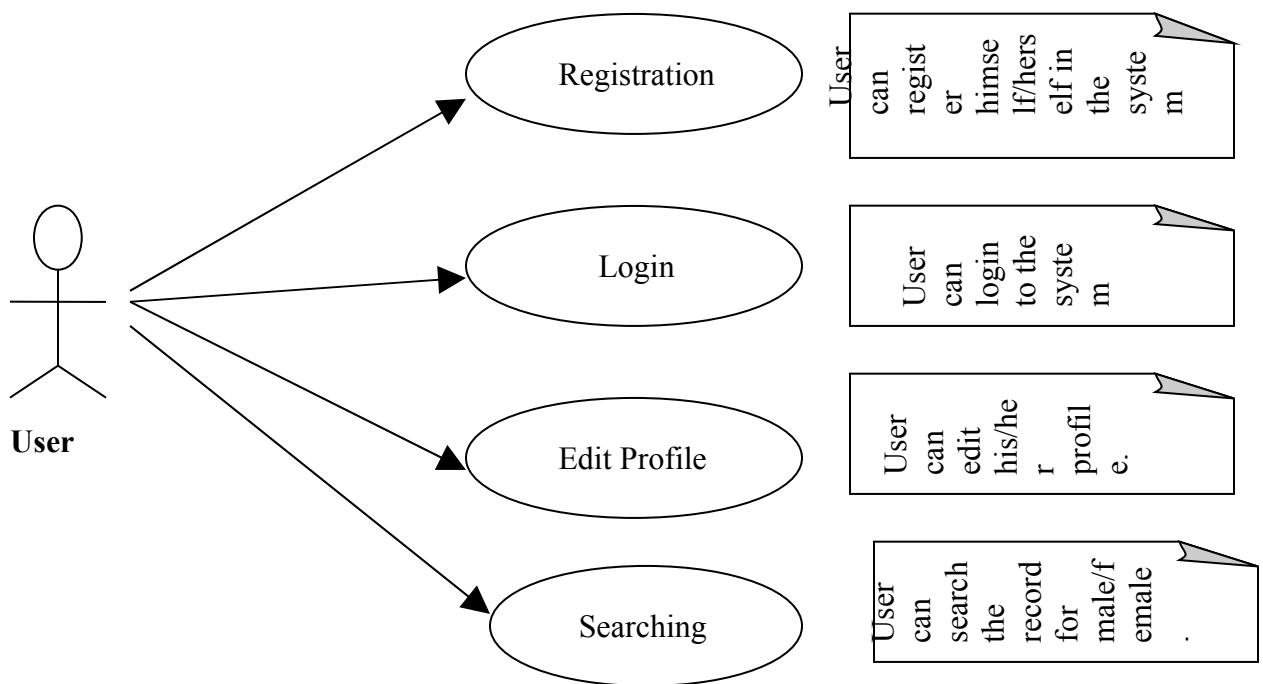

### **5.0 Post Conditions**

There are no post conditions.

### **6.0 Extension Points**

There are no extension points.

### 3.3.2 User Use Case :-

## 1.0 Use case Name

User.

### 1.1 Brief Description

User can perform several operations on the system like registration, login. He or she can also edit his or her profile, searching facility is also there.

## **2.0 Flow of Events**

### **2.1 Basic Flow**

User can perform mainly four activities.

Registration:-

Before using this system the user must have to register in the system. He have to fill up the form and enter his/her profile in the database.

Login:-

The existing users are giving his/her userid & password to access their accounts. If they are successfully login then they can edit or update their accounts.

Edit profile:-

The user can also edit his/her personal profile in the system but first he/she have to login in the system.

### **2.2 Alternate Flows**

#### **2.2.1 Invalid Password**

An invalid password is entered. The user can re-enter a password or terminate the use case.

#### 2.2.2 Invalid Username:

The system informs the user that the username is invalid. The user can re-enter the username or terminate the use case.

### **3.0 Special Requirements**

The user must be first login to access his accounts.

### **4.0 Preconditions**

The user must be first login to access his accounts.

### **5.0 Post Conditions**

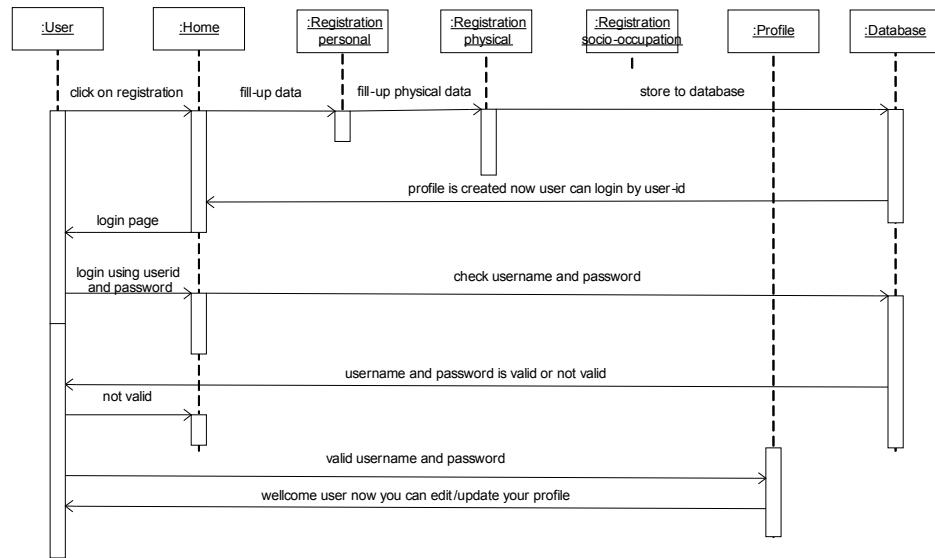

There are no post conditions.

### **6.0 Extension Points**

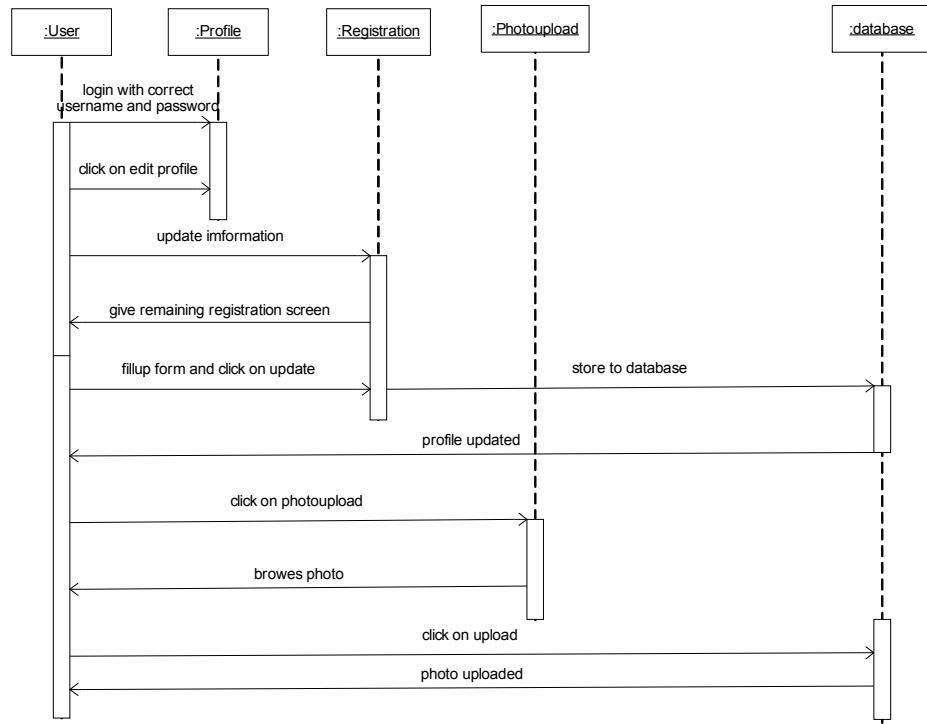

There are no extension points.

### 3.4 SEQUENCE DIAGRAM

## **Chapter 4**

### **DESIGN**

---

## **4.1 SYSTEM REQUIREMENT SPECIFICATION**

R1: Admin login page

R.1.1 For report generate.

Input: Click on link of report generate.

Output: Control is redirect to the screen of report generate, which contain

three type of report generation.

1. Report of paid member.
2. Report of free member.
3. Report of all member.

R.1.2 For send or read mail.

Input: Click on link of mail.

Output: Control is redirect to the screen of mail, which contain two link

1. Send mail.
2. Read mail.

R2: Login page

R.2.1 For unregistered person, registration process

Input: Click on link for new registration.

Output: Registration is done for new user

Flow: Control is redirected to registration form and after fill up the form

and after click on the register button data of new user is stored into database and an email is sent to the user

#### R.2.2 For registered person, login process

Input: MemberId and password.

Output: Get the screen of verify MemberId and Password.

Flow: If MemberId and Password correct then user will get his/her profile. user can do update profile, create album, change photo, hide profiletoure, apply for loan after correct login.

### 4.3 TABLE RELATIONSHIP

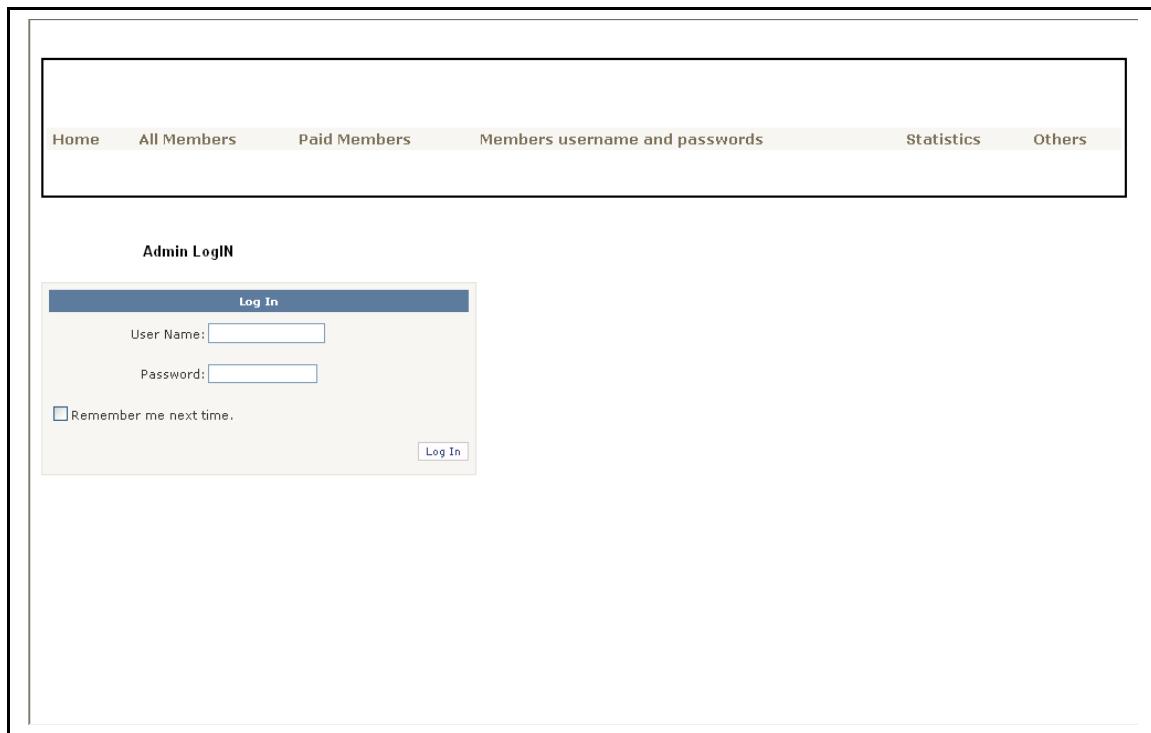

## 4.4 FRONT END INTERFACE

In front end interface I have first design the interface and after complete designing have implemented it using ASP . Here in user interface main two users are there, administrator and normal user. Administrator has authority to generate report, delete profile, update information for directory. And a normal user can search partner, registration, profile management.

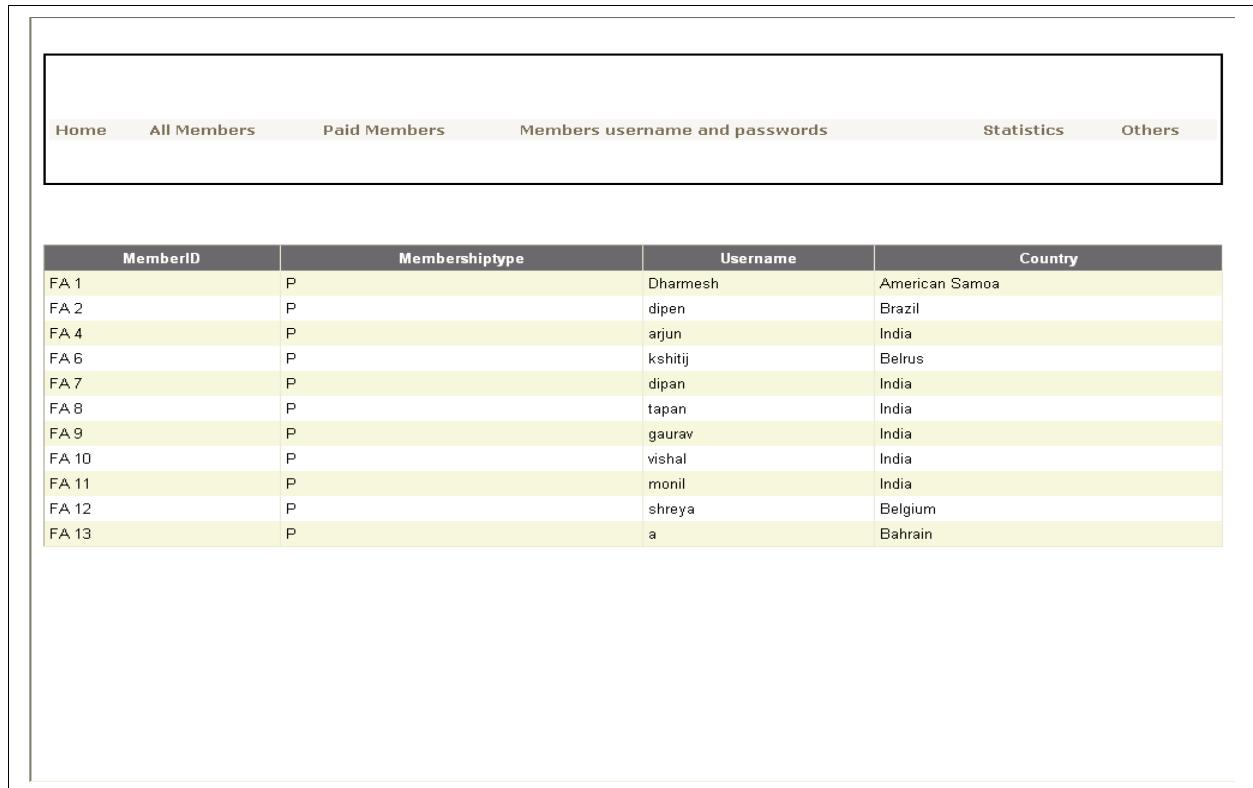

### **Admin Login Page at run time:**

This is the admin login page. After successfully login user can authenticate to system. Admin can generate report for all member, paid member, free member. Also update information for directory, delete profile of user.

The screenshot shows a web-based admin login interface. At the top, there is a navigation bar with links: Home, All Members, Paid Members, Members username and passwords, Statistics, and Others. Below the navigation bar is the main content area, which is titled "Admin LogIN". This area contains a "Log In" button, two input fields for "User Name" and "Password", and a checkbox labeled "Remember me next time." A second "Log In" button is located below the password field.

## List of all members :

Home    All Members    Paid Members    Members username and passwords    Statistics    Others

MemberID	Membership type	Username	Country
FA 1	P	Dharmesh	American Samoa
FA 2	P	dipen	Brazil
FA 4	P	arjun	India
FA 6	P	kshitij	Belrus
FA 7	P	dipan	India
FA 8	P	tapan	India
FA 9	P	gaurav	India
FA 10	P	vishal	India
FA 11	P	monil	India
FA 12	P	shreya	Belgium
FA 13	P	a	Bahrain

## CONVERTING FREE MEMBERS TO PAID MEMBERS :

Home    All Members    Paid Members    Members username and passwords    Statistics    Others

MemberID	Username	Membershiptype	Country	
FA 3	ritesh	F	Cameroon	<input type="button" value="Convert"/>
FA 5	pinkal	F	India	<input type="button" value="Convert"/>

## Site statistics

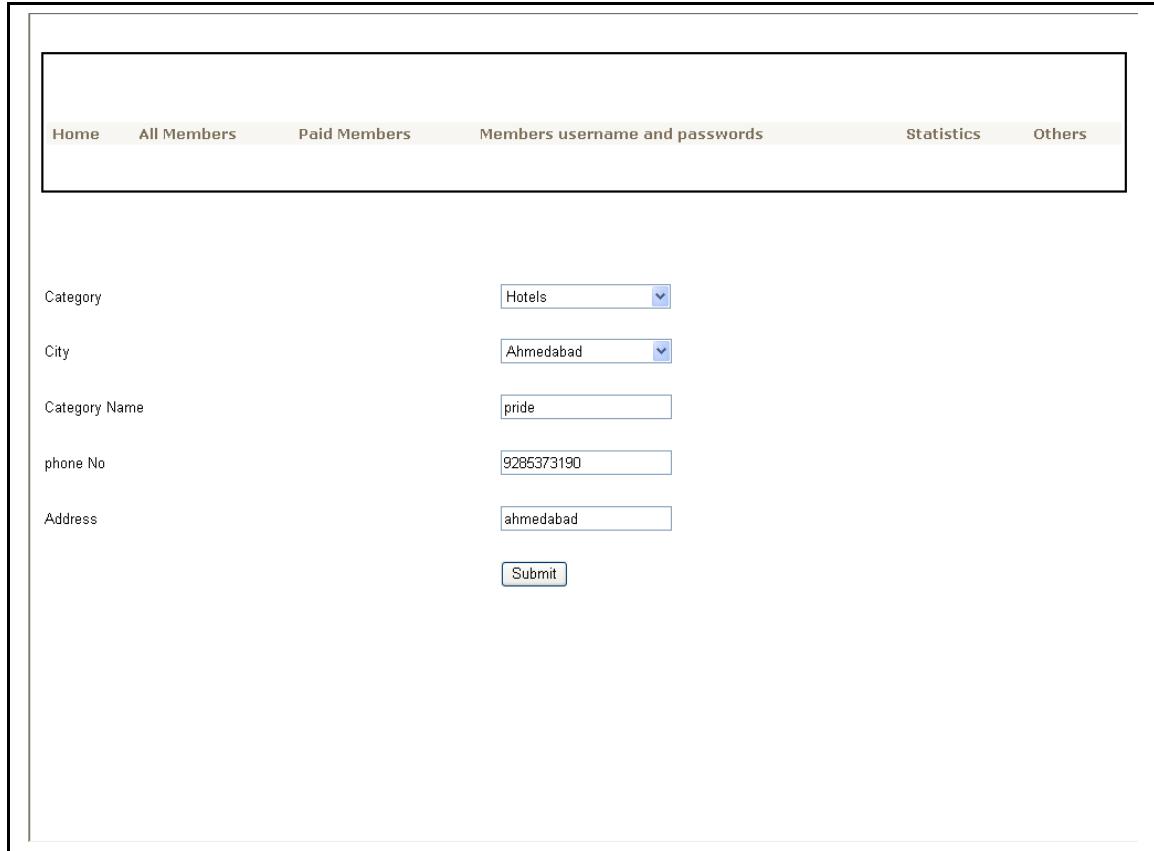

Home    All Members    Paid Members    Members username and passwords    Statistics    Others

 Site Statistics

<b>Total Members</b>	<b>13</b>

### Success Story

*The responses that I got, made me realize that I should have tried this a long time ago...*

Specially after I added my photo... in the beginning, I didn't want to put it up on a website. But it seemed safe on Shaadi.com since I was given a password to keep it hidden until I was sure the person was serious about marriage. Then I received Karan's mail. We both clicked right away and got engaged on 12 Aug...

**Let your photo do all the talking!**

It is a widely accepted fact that profiles with photos get more attention and response. We have enlisted a few ways through which you can add photos to your profile.

**Why you should Add Photo?**

- Get 20 times more response
- Get featured in photo search results
- Express yourself in more ways than one

**Tips for a perfect photo**

- Ensure that all the photos are individual shots of yourself
- The main photo should be a close-up shot
- The other photos may feature you in different postures
- Ensure that all photos are clear and at least post card size

**Upload your Photo now!**

## Personal Message And Express Interest Page At Run Time:

Here user can see the messages he has sent to other members and received from the other members.

The screenshot shows the Wedindia website interface. The header features the 'Wedindia' logo and the tagline 'We make relation...'. The navigation bar includes links for Home, Search, My Profile, Paid Membership, and Logout. On the left, there are buttons for My Messages, Message Sent, Message Received, Interests, Interests Received, and Interests Sent. The 'My Profile' section is highlighted with a yellow box and contains links for Modify Profile, Modify Partner Preference, Hide Profile, and Delete Profile. A message from 'FA 10' is displayed, stating: 'I am interested in your profile. If you are interested in my profile, please contact me.' At the bottom, there is a 'My Album' section with a link to 'My Album'.

## Search Option Page At Run Time:

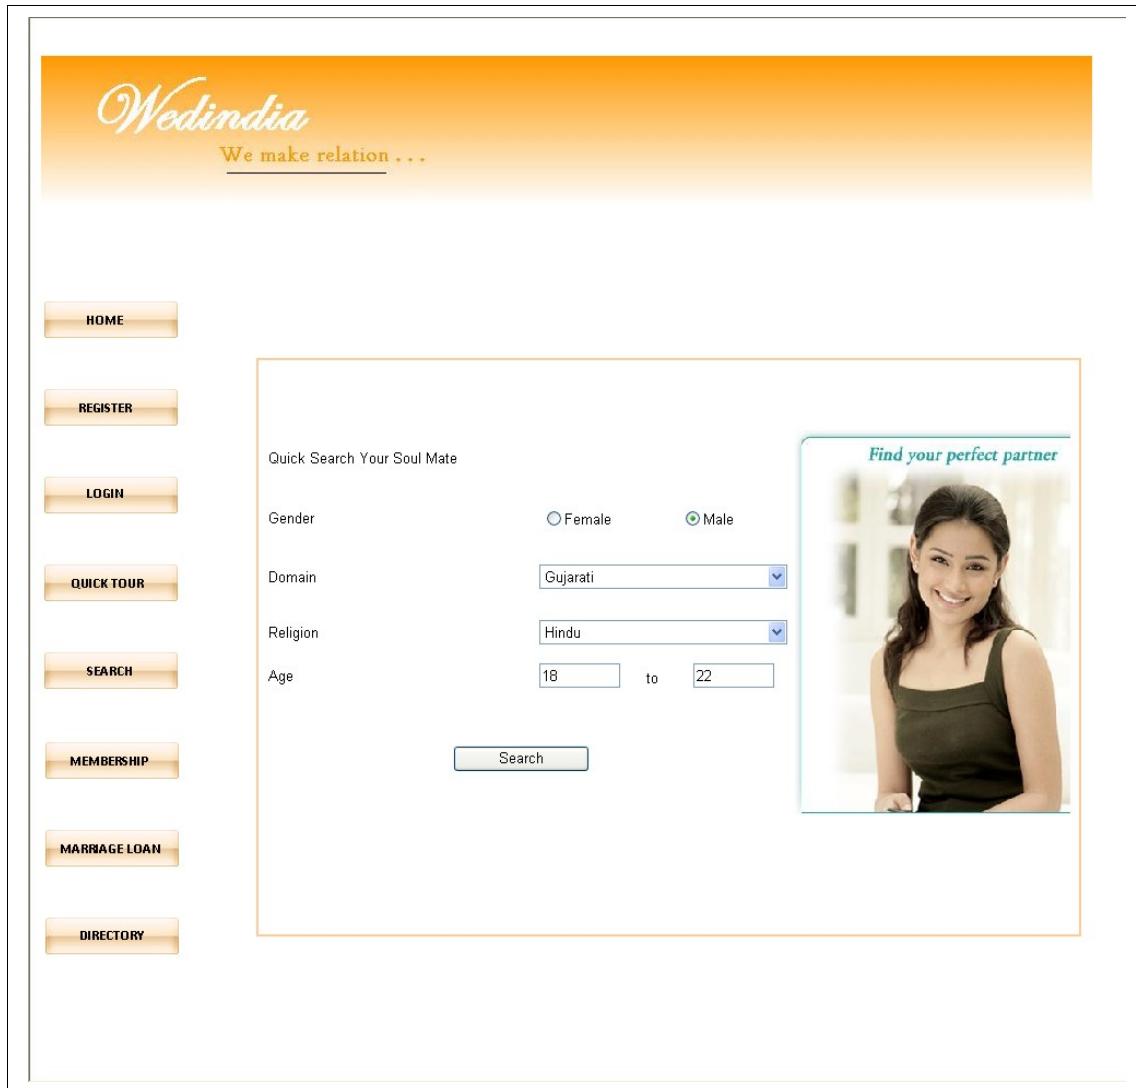

This is the search option page. It provides facility to user to search about partner. This page contain five type link for search, like quick search, advance search, search by id, search by profession, search by location.

The screenshot shows the Wedindia website interface. At the top, the logo 'Wedindia' and the tagline 'We make relation ...' are displayed. On the left, a vertical menu bar contains buttons for 'HOME', 'REGISTER', 'LOGIN', 'QUICK TOUR', 'SEARCH', 'MEMBERSHIP', 'MARRIAGE LOAN', and 'DIRECTORY'. The 'SEARCH' button is highlighted. To the right of the menu, the text 'Search options' is followed by the message 'Our various search tools will make your partner search much faster and easier. Go ahead and enjoy your search.' Below this, a large green box lists five search options, each with an icon and a brief description:

- Quick Search**: Search based on the most important criteria that you would look for in a partner.
- View by profile ID**: Directly helps you to view the profile of a particular ID..
- Search by Profession**: Search based on the Profession ..
- Advance Search**: The most comprehensive search that searches across all criteria.
- Search by location**: Search based on the location ..

## Quick Search Page At Run Time:

This is the quick search page. It provides facility to user to quick search about partner. For quick search about partner user have to fill-up information like age range, domain, gender, religion, of search partner .

The image shows the 'Wedindia' website's quick search page. The header features the 'Wedindia' logo and the tagline 'We make relation ...'. On the left, a vertical sidebar contains links for HOME, REGISTER, LOGIN, QUICK TOUR, SEARCH, MEMBERSHIP, MARRIAGE LOAN, and DIRECTORY. The main content area is titled 'Quick Search Your Soul Mate' and includes fields for Gender (radio buttons for Female and Male, with Male selected), Domain (a dropdown menu showing 'Gujarati'), Religion (a dropdown menu showing 'Hindu'), and Age (text boxes showing '18' and '22' with a 'to' separator). A 'Search' button is located below these fields. To the right of the search form is a large, framed advertisement featuring a smiling woman and the text 'Find your perfect partner'.

## Quick Search Result Page At Run Time:

This is the quick search result page. It provides information like memberid, name, gender of partner. if user want to know more about search partner then user need to click on details button.

The screenshot shows the WedIndia website interface. The header features the logo 'WedIndia' and the tagline 'We make relation ...'. On the left, there is a vertical sidebar with buttons for HOME, REGISTER, LOGIN, QUICK TOUR, SEARCH, MEMBERSHIP, MARRIAGE LOAN, and DIRECTORY. The main content area is titled 'Search Results' and displays a table of search results. The table has columns for Memberid, Name, Gender, and Detail. The data in the table is as follows:

Memberid	Name	Gender	Detail
FA8	tapan	Male	<a href="#">Detail</a>
FA10	vishal	Male	<a href="#">Detail</a>
FA11	monil	Male	<a href="#">Detail</a>
FA13	a	Male	<a href="#">Detail</a>

## Advance Search Page At Run Time:

This is the advance search page. It provides facility to user to advance search about partner. For advance search about partner user have to fill-up information like age range, domain, gender, interest, height, mother tongue, religion, cast, manglik, eating habit, education, citizen ship, country, resident status of search partner.

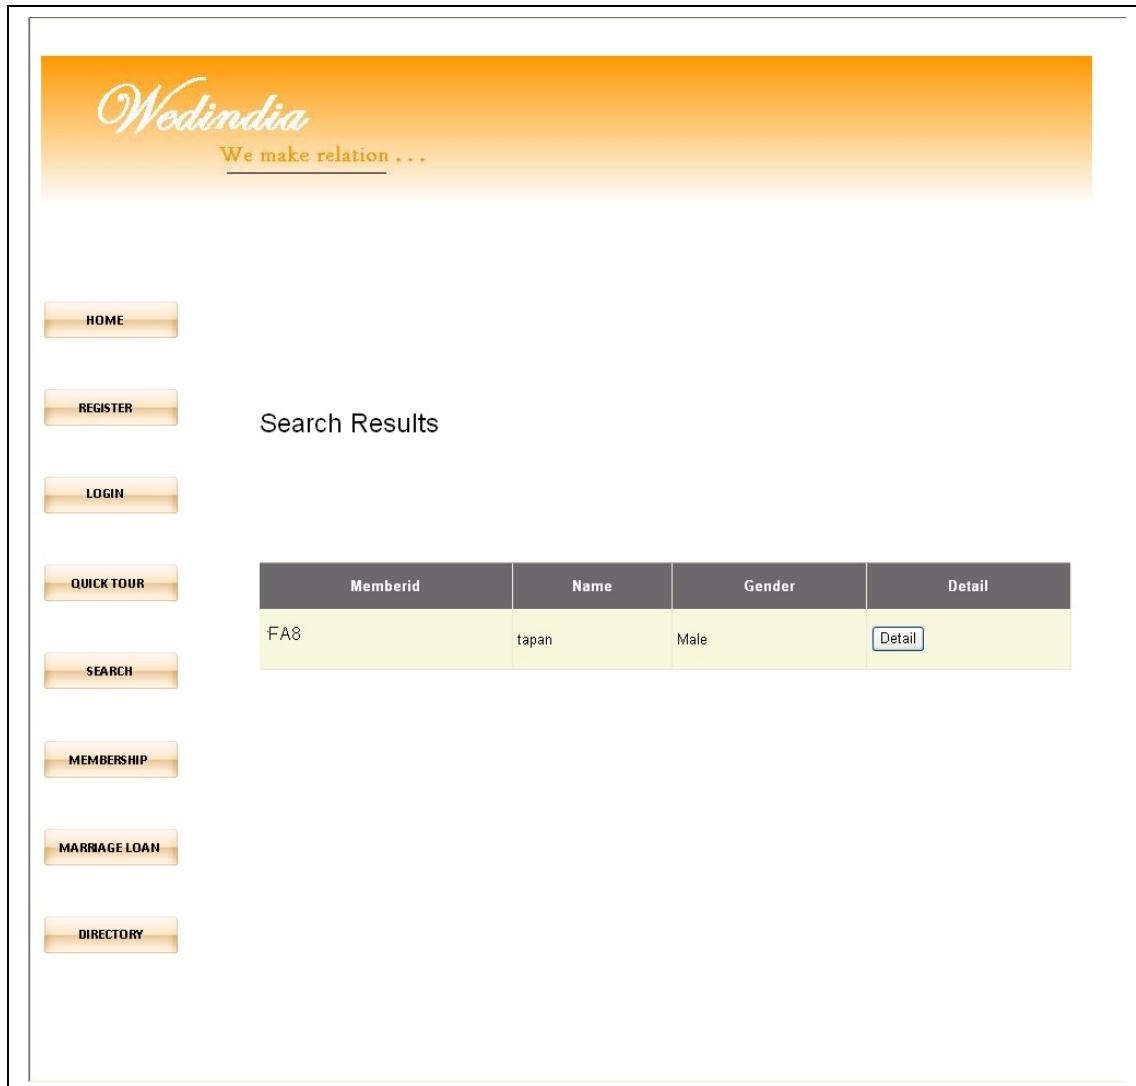

The image shows the 'Wedindia' website's advance search page. The header features the 'Wedindia' logo and the tagline 'We make relation...'. On the left, a vertical sidebar contains links for HOME, REGISTER, LOGIN, QUICK TOUR, SEARCH, MEMBERSHIP, MARRIAGE LOAN, and DIRECTORY. The main content area is titled 'Advance Search' and contains several form fields for specifying search criteria:

- Domain:** Gujarati (selected)
- Looking for:** Male (radio button selected)
- Age:** From 18 to 22
- Interests:** Unmarried (radio button selected), Widow/Widower, Divorced, Separated
- Height:** From 140 to 170
- Mother tongue:** Gujarati
- Religion:** Hindu
- Cast/Division:** ST
- Manglik:** Doesn't matter (radio button selected), Yes, No
- Eating Habits:** Vegetarian (radio button selected), Non-Vegetarian, Eggatarian
- Education:** B.Com
- Citizenship:** India
- Country living in:** India
- Resident status:** Citizen (radio button selected), Permanent resident, Work Permit, Student Visa, Temporary Visa

At the bottom right of the search form is a 'SUBMIT' button.

## Advance Search Result Page At Run Time:

This is the advance search result page. It provides information like memberid, name, gender of partner. if user want to know more about search partner then user need to click on details button

The screenshot shows the Wedindia website interface. The header features the 'Wedindia' logo and the tagline 'We make relation ...'. On the left, a vertical menu bar contains buttons for HOME, REGISTER, LOGIN, QUICK TOUR, SEARCH, MEMBERSHIP, MARRIAGE LOAN, and DIRECTORY. The main content area is titled 'Search Results'. A table displays search results with the following data:

Memberid	Name	Gender	Detail
FA8	tapan	Male	<a href="#">Detail</a>

## Search By Id Page With Result At Run Time:

This is the search by id page. Here user enter member id and click on search button it will get information like memberid, name, gender of partner. if user want to know more about search partner then user need to click on view details link.

## 5.2 SECURITY FEATURE

In this application all data transaction is doing under HTTP secure protocol In this application Login id and password verification is required. User should Login with authenticated memberid and password as well as user should verified his/her password. Failure to do this will not allow to user to access the application

## 5.3 CODING STANDARD

Checks for Normal Working	To Be Checked?
a. Does your screen save data in the database?	*
b. Does your screen save correct data in the database?	*
c. In update does your screen load correct data?	*
d. Fields are showing the data in correct format? [USE REGULAR EXPRESSIONS DEFINED AS PER TESTING STANDARDS]	
1. Date a) Should always be selectable in addition to manual entry	*
2. Integer	*
3. Float, Double	*
4. Percentage	*
5. For web site entry field, populate by default with value ( <a href="http://www.">http://www.</a> )	*
6. All email entry fields should be multiple email addresses enabled	*

e. Will your screen crash if wrong data type is entered?	*
f. Does your screen sequence is working?	*
g. If the logic updated / approved?	*

<b>Basic Validations</b>	
a. Maximum allowed length property is set?	*
b. Validation for Required field is done?	*
c. Validation for Integer, Float, Double, Date, Time is done?	*
d. Spell check	*
e. Type Check / Type Safety	*
f. Boundary Value Analysis (for highest order value and lowest order value)	*
g. Date Format (dates must be converted from SQL only) NEVER DISPLAY 12:00:00 AM	*
h. Is page validation enabled? [must be done for user entry fields]	*

<b>User Interface Checks</b>	<b>To Be Checked?</b>
a. Caption of each label is correct, do you have read caption twice? Captions must not be in bold.	*
b. Tab sequence is set correctly? i. On load, focus should go to first data entry field. Only in Search focus should go to first search result on search , on load, set focus to fist search field	*
c. Panel heading are right? Make sure you have used CSS class for DIV formatting	*
d. Main heading of the screen is Right? Look at application bar in browser window.	*
e. Menu heading is correct?	*
f. If the screen is part of a screen sequence / wizard than:	

User Interface Checks	To Be Checked?
1. Have you given Steps as heading s to make sequence understood?	*
2. Next / Back Button should be at one fixed location	*
3. Wizard should have consistent size for all steps.	*
4. Make sure all elements in all wizard steps are consistent.	*
a) For example, if you are using left side part of data entry fields, then align same width for it on all wizard steps (60% for data entry & 40% for search of list panel)	
g. Fields are having width as per their length in the database?	
h. Fields are well aligned?	
i. Always follow the rule of left to right with increasing indent.	*
ii. Images should be well aligned and text should be centre aligned to image, NOT TOP OF BOTTOM.	
iii. IF YOU HAVE MULTIPLE lines of text to be aligned,	
1. User should not move his mouse all over screen to click one button to another	
i. Is the screen look good and well formatted?	
j. Default values are given as per requirement?	
i. Highlight compulsory fields with * and put an Note on screen in light grey color that * Indicates Compulsory Fields	*
ii. All static information fields must be in specific color variants	*

User Interface Checks	To Be Checked?
<p>iii. ENTER KEY SHOULD PERFORM CORE SCREEN OPERATION ON EACH SCREEN. IT SHOULD BE DEFAULT BUTTON,</p> <p>1. After save / update , if you are focusing back to same screen, in case you retain same record, move focus to first editable field on screen or for new records, move focus to first field as well.</p>	*
iv. Images / logos should have tooltip + alternate text	*
v. Each grid should have paging size between [`10-25] per page + exception handling code in bind for no page scenario	*
vi. Sorting should be enabled for all columns in grid	*
vii. SCREENS SHOULD BE CENTRE ALIGNED to eliminate screen size issues	*
viii. Width of screen should be maximum to 980 PX	*
ix. TARGET 1024 X 768 resolution	*
x. USE HTML formatting in alert boxes when you want to display confirmation messages	*
xi. Sequence of Fields should be pleasing to eye [do not make your screen look like khichdi of controls) give user some breathing space	*

User Interface Checks	To Be Checked?
xii. User minimum colors.	*
xiii. Help Button should be at top right corner of the form (not application) and screen # + Type : <application / paint> should be added to each screen	*
xiv. PROVIDE HELP WITH EXAMPLE, remain objective in help text.	
xv. User focus will go from left to right, use left section of your page for more important information.	*
xvi. Wherever you use images, use legends on screen.	*
xvii. Each dropdown should be default sorted	*
xviii. Each grid should be sorted by default [as per field availability]	*
xix. If you happen to open something in new window, use an image to indicate that.	*
xx. Search result should be consistent	*
xxi. PAGE SHOULD NEVER SCROLL HORIZONTALLY...NEVER EVER	*
xxii. USE ARIAL / VERDANA FONT	*
xxiii. Warning messages should be informative.	*
xxiv. Each page should have breadcrumb [hyperlink enabled]	*

User Interface Checks	To Be Checked?
xxv. If the requirement is Data should be shown in Capital, then adequate measures are done?	*
xxvi. Show results found on each search screen <ol style="list-style-type: none"> <li>1. If there are no results, show 0 results found, and set focus to first field of data entry on the screen.</li> </ol>	*
Even if you cannot control back button behavior for now, DO NOT ENTICE USER TO USE BACK BUTTON, provide back link on screen itself where required. CLOSE APPLICATION IF BACK BUTTON IS PRESSED ON ANY OF THE SCREENS.  Also, disable submit button after it is clicked once. POPULATE FIELDS WITH DEFAULT VALUES [for example, First Name field data entry should read, Enter First Name and as soon as focus is there, remove that text]	*

## **5.4 STORED PROCEDURE**

After creating database I have created stored procedure for select,insert,update and delete. With the help of the stored procedure access should be fast and we don't have need to compile it. we can run it directly. I have created stored procedure inserting all data of the table with value type and than I have created query for select,update,delete,insert in their procedure.

## **5.5 DATA ACCESS LAYER**

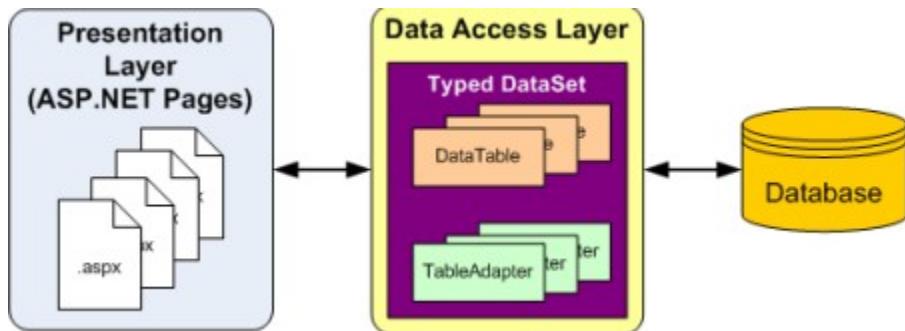

### **Data Access Layer:**

When working with data one option is to embed the data-specific logic directly into the presentation layer. This may take the form of writing ADO.NET code in the ASP.NET page's code portion or using the SqlDataSource control from the markup portion. creating a connection to the database, issuing SELECT, INSERT, UPDATE, and DELETE commands, and so on – should be located in the DAL. The presentation layer should not contain any references to such data access code, but should instead make calls into the DAL for any and all data requests. I have created data access layer for Fill() and Get() methods. Get is done by two ways.

- GetStory(), which will return information about the success story or user who met by this site.
- GetMessage(), which will return information about a message for particular type of membership..

These methods, when invoked, will connect to the database, issue the appropriate query, and return the results. These methods could simply return a DataSet or DataReader populated by the database query, but ideally these results should be returned using strongly-typed objects.

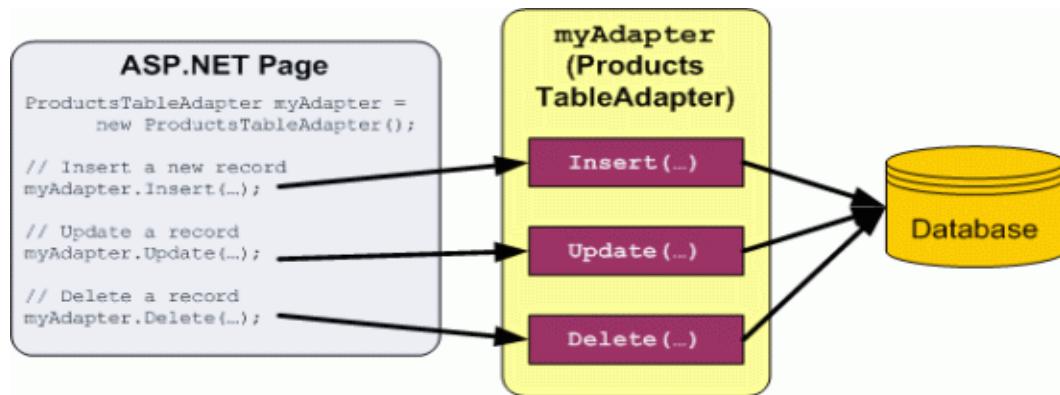

In strongly-typed DataTable, will have each of its columns implemented as properties, resulting in code that looks like: DataTable.Rows[index].columnName. Figure illustrates the workflow between the different layers of an application that uses Typed DataSets.

To retrieve the data to populate the DataTable, I used a TableAdapter class, which functions as my Data Access Layer. For our story DataTable, the TableAdapter is containing the methods – Getstory(), Getstorybyid(memberid), and so on – that I can invoke from the presentation layer. The DataTable's role is to serve as the strongly-typed objects used to pass data between the layers.

I have a Typed DataSet with a single DataTable (message) and a strongly-typed DataAdapter class (FmsgTableAdapter, PmsgTableAdapter) with a GetMessage() method. In my application I have used pattern for inserting, updating, and deleting data, this pattern involves creating methods that, when invoked, issue an INSERT, UPDATE, or DELETE command to the database that operates on a single database record. Such methods are typically passed in a series of scalar values (integers, strings, Booleans, DateTimes, and so on) that correspond to the values to insert, update, or delete.

The patterns use the TableAdapter's InsertCommand, UpdateCommand, and DeleteCommand properties to issue their INSERT, UPDATE, and DELETE commands to the database.

**Figure Each Insert, Update, and Delete Request Is Sent to the Database Immediately**

## 5.6 BUSINESS LOGIC LAYER

The DAL cleanly separates the data access details from the presentation layer, it does not enforce any business rules that may apply. So I have to Create Business Logic Layer (BLL). these business rules into a Business Logic Layer (BLL) that serves as an intermediary for data exchange between the presentation layer and the DAL. In BLL the rules like value cant be null, some field changed only by admin and so on...

BLL will be composed of classes, one for each TableAdapter in the DAL; each of these BLL classes will have methods for retrieving, inserting, updating, and deleting from the respective TableAdapter in the DAL, applying the appropriate business rules. The BLL classes can accessed declaratively (as can the Typed DataSet) by using the ObjectDataSource.

I have created Dataadapter object than creating methods for Adddata(), Updatedata(), Deletedata(). In this method creating Objects for dataset and

datarow and with the help of the datarow object getting/updating/deleting data and for that I have used Try and Catch method.

## **Chapter 6**

### **TESTING**

---

## **6.1 TESTING PLAN**

Similar to the project plan, due to confidentiality issues, we cannot provide details test plan to the development team. We will still add the core components that make up our test plan.

- 1.1.1 Test plan identifier
- 1.1.2 References
- 1.1.3 Introduction
- 1.1.4 Test items (functions)
- 1.1.5 Application risk issues.
- 1.1.6 Features to be tested
- 1.1.7 Features not to be tested
- 1.1.8 Approach (strategy)
- 1.1.9 Item pass/fail criteria
- 1.1.10 Entry & exit criteria

## **6.2 TESTING STRATEGY**

Test More and Test Frequent is organization 's tagline for testing. A typical screen in asp.net is tested at four levels before it goes for production.

Level 1 is generally the work to be tested by other developers or other interns (this is typical first level of testing where focus is not on requirement but end user testing)  
Ratio: 0% end user: 100% Technical

Level 2 is level where a senior programmer comes into the testing cycle of the screen that was unit tested by the developer in this phase the onus is to test software for technical requirements specified.

Ratio: 80% Technical: 20% end user

Level 3 is where a tester will come into picture. The tester will test the software for both end user as well as technical point of view.

The ratio here is: 50% Technical: 50% end user

Level 4 is where we make the code at Release-Ready. Here screen is tested to the core and each and every standard must be followed and verified.

Ratio here is: 80% User Testing – 20% Technical

This allows us to test a screen at four levels and at the end of four weeks when the screen goes to production, it is generally bug free because more people have looked at this screen from different viewpoints.

References available while testing

- Project Plan.
- System Requirements specifications.
- High Level design document.
- Detail design document.
- Development and Test process standards.
- Methodology.
- Low level design.

Also organization has Separate module to store all bugs

So each screen is released for testing as a build and all information for that screen (till release) is maintained using this particular build .

### **CONTENT TESTING:**

Errors in Web Application content can be as trivial as minor typographical error as incorrect information, improper organization or validation of intellectual property laws. Content Testing attempt to uncover this and many other problems before the user encounter them.

Content Testing Objectives

There are three types of objectives.

- To uncover syntactic errors in text-based documents, graphical representation and other media.

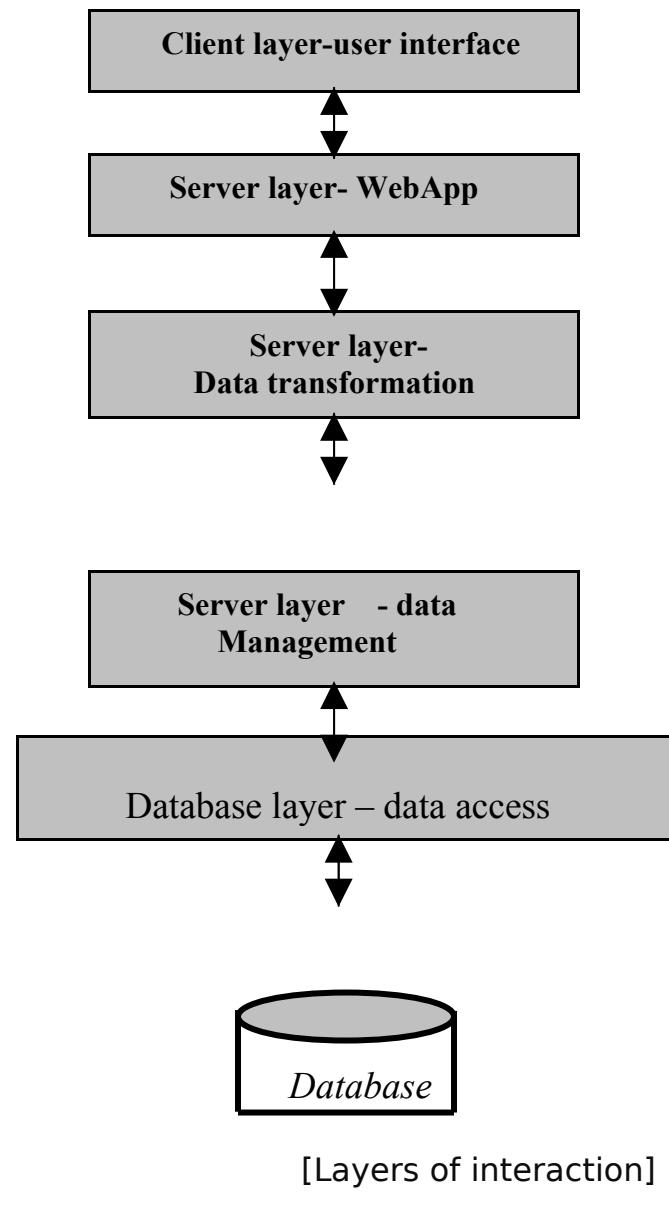

- To uncover semantic errors in any content object represented as navigation occurs, and
- To find errors in organization or structure of content that is presented to the end-user

### **DATABASE TESTING:**

Modern Web Application does much more than present static content objects. In many application domains, Web Application interface with sophisticated database management system and build dynamic content object that are created in real time using the data acquired from a database.

Database Testing for Web Application is complicated by a variety of factor.

- 1) The original client side request for information is rarely presented in the form that can be input to a database management system.
- 2) The database may be remote to the server that houses the Web application.
- 3) RAW data acquired from the database must be transmitted to the Web application Server and properly formatted for subsequent transmittal to the client.
- 4) The dynamic content objects must be transmitted to the client in a form that can be displayed to the end user.

In figure testing should be ensure that

1. valid information is passed between the client and server from the interface layer
2. The Web application process script correctly and properly extract or formats user data.

3. Queries are passed to a data management layer that communicates with database access routines.
  
4. User data are passed correctly to a server side data transformation function that format appropriate queries.

## **INTERFACE TESTING**

Interface design model is reviewed to ensure that generic quality criteria established for all user interfaces have been achieved and that application specific interface design issue has been properly addressed.

### **Interface testing strategy:**

The overall strategy for interface testing is to (1) Uncover error related to specific Interface mechanisms (2) uncover errors in the way the interface implements the semantics of navigation, Web Application functionality, or content display. to accomplish this strategy, a number of objectives must be achieved:

Interface futures are tested to ensure that design rules, aesthetics, and related visual content are available for the user without error. Individual interface mechanisms are tested in a manner that is a logous to unit testing For example, tests are designed to exercise all forms, client-side scripting, dynamic HTML. Each interface mechanism is tested within the context of a use-case or NSU for a specific user category The interface is tested within a variety of environments to ensure that it will be compatible.

### **Testing Interface Mechanisms**

When a user interacts with a Web Application, the interaction occurs through one or more interface mechanisms.

Links: -

Each link is tested to ensure that the proper content object or Function is reached. The Web engineer builds a list of all links associated with interface layout. and then executes each individually.

Forms: -

At a microscopic level, tests are performed to ensure that Labels correctly identified fields within the form and that mandatory fields are identified visually for the user. The server receives all information content within the form and their no data are lost in the transmission between client and serverAppropriate defaults are used when the user does not select from a pull down menu or set of buttons.Browser function don't corrupt data enter in a form and Scripts that perform error checking on data entered work Properly and provide meaningful error message.

Client side scripting:-

Black box tests are conducted to uncover any error in processing As the script is executed . These tests are coupled with forms testing because script input is often derived from data provided as part of forms processing

Dynamic HTML:-

Each Web page that contain dynamic HTML is executed to ensure that the dynamic display is correct. In addition a compatibility test should be conducted to ensure that the dynamic HTML is work properly in the environmental configuration that support the Web application.

Application specific interface mechanisms:-

Test conforms to a checklist of functionality and features that are defined by the interface mechanism. Boundary test minimum and maximum number of item that can be placed in to shopping chart. Test to determine persistence of shopping chart contents. Test to determine whether the Web Application can be record shopping chart content at some future date.

## **USABILITY TESTING**

Usability test may be designed by Web engineering team. Define a set of usability testing categories and identify goal for each. Design test that will enable each goal to be evaluated. Select participants who will conduct test. Instrument participant's interaction with Web Application while testing is conducted. Develop a mechanism for assessing the usability of the Web Application.

The following test categories and objective illustrate establish testing

Interactivity –

Are interaction mechanism easy to understand and use?

Layout-

Are navigation mechanism, content and function place in a manner that allows the user to find them quickly?

Readability-

Is text well written and under stable?

Aesthetics-

Do layout color, typeface, and related characteristics lead to ease of use ?

Display Characteristics-

Does the Web Application make optimal use of screen size and resolution?

Time Sensitivity-

Can important features, functions and content be used in a timely manner?

Accessibility-

Is the Web application accessible to people who have Disabilities?

## **COMPATIBILITY TESTING**

Web application must operate within environment that differs from one another. Different computer, display device, OS, browser and network connection speed can have significant on Web application operation. Different browser some time produced slightly different results, regardless of the degree of HTML standardization within the Web application.

The Web Engineering team derives a series of compatibility, validation tests, derived from existing interface tests, navigation tests, performance tests and security tests.

## 6.3 TESTING METHODS

Testing presents an interesting anomaly for the software engineering activities, the engineer attempts to build software from an abstract concept to a tangible product. Now comes testing. The engineer creates a series of test case that are initiated to "demolish" the software that has been build. Infect, testing is the one step in the software process that could be viewed (psychologically, at least) as destructive rather than constructive.

Models of Testing:-

There are different Models of testing. On the basis of testing methods there are two types of testing:

1. Black-box testing.
2. White-box testing

Black-box tests are used to demonstrate that software functions are operational, that input is properly accepted and output is correctly produced, and that integrity of external information is maintained.

White-box tests are used to examine the procedural details. It checks the logical paths by test case. It can also checks the conditions, loops used in the software coding. It checks that loops are working correctly on defined boundary value.

## **WHITE-BOX TESTING:**

White-box testing sometimes called glass-box testing, is a test case design method that uses the control structure of the procedural design to drive the test case. Always we are thinking that there is no necessary to execute or check the loops and conditions. And so a large number of errors are uncovered. With using white-box testing methods, we have checked that; All independent paths within a function have been executed at least once.

All logical decisions on their true and false side. All loops working correctly at their boundary values and within their specified conditions.

In our coding we test that all the loops work truly in each module. The one technique of white-box testing is basis path testing. It contains two parts, one is flow graph notation and the second is cyclomatic complexity. In flow graph notation we are checking logical control of flow. By using cyclomatic complexity we find complexity of our project structure.

## **BLACK-BOX TESTING:**

Black-box testing focuses on the functional requirements of the software. That is black-box testing enables the software engineer to drive sets of input conditions that will fully exercise all functional Requirements for the program. Black-box testing is not an alternative to white-box testing techniques. Rather, it is a complementary approach that is likely to uncover a different class of errors than white-box methods.

We use in our coding to find errors in the following categories:

- Incorrect or missing functions
- Interface errors
- Errors in database
- Performance errors

- Initialization and termination errors.

Unlike white-box testing, which is performed earlier in the testing process, black-box testing tends to be applied during later stages of testing. Because black-box testing purposely disregards control structure, attention is focused on the information domain.

By applying black-box techniques, we derive a set of test cases that satisfy following criteria

Test cases that reduce, by a count that is greater than one, the number of additional test cases must be designed to achieve reasonable testing.

#### Level 1 - Build Acceptance Tests

Other related test cases ensure that adopters received the proper Development Release Document plus other build related information (drop point, etc.). The objective is to determine if further testing is possible. If any Level 1 test case fails, the build is returned to developers un-tested.

#### Level 2 - Smoke Tests

The objective is to determine if further testing is possible. These test cases should emphasize breadth more than depth. All components should be touched, and every major feature should be tested briefly by the Smoke Test. If any Level 2 test case fails, the build is returned to developers un-tested.

#### Level 2a - Bug Regression Testing

Every bug that was “Open” during the previous build, but marked as “Fixed, Needs Re-Testing” for the current build under test, will need to be regressed, or re-tested. Once the smoke test is completed, all resolved bugs need to be regressed. It should take between 5 minutes to 1 hour to regress most bugs.

### Level 3 - Critical Path Tests

Critical Path test cases must pass by the end of every 2-3 Build Test Cycles. They do not need to be tested every drop, but must be tested at least once per milestone. Thus, the Critical Path test cases must all be executed at least once during the Iteration cycle, and once during the Final Release cycle.

### Level 4 - Standard Tests

Test Cases that need to be run at least once during the entire test cycle for this release. These cases are run once, not repeated as are the test cases in previous levels. Functional Testing and Detailed Design Testing (Functional Spec and Design Spec Test Cases, respectively). These can be tested multiple times for each Milestone Test Cycle (Iteration, Final Release, etc.).

Standard test cases usually include Installation, Data, GUI, and other test areas.

### Level 5 - Suggested Test

These are Test Cases that would be nice to execute, but may be omitted due to time constraints

## **Bug Regression**

Bug Regression will be a central tenant throughout all testing phases. When a Severity 1 bug fails regression, adopters Testing team should also put out an immediate email to development. The Test Lead will be responsible for tracking and reporting to development and product management the status of regression testing.

## 6.4 TEST CASES

### 6.4.1 Test Cases

Test Case No.	1
Test Case Action	Checks system behavior when credentials provided by admin are correct.
Input	Click on allmember link by admin.
Expected output	Result page which contain information about only all member.
Pass/Fail	Pass

Home	All Members	Paid Members	Members username and passwords	Statistics	Others
MemberID	Membershiptype		Username	Country	
FA 1	P		Dharmesh	American Samoa	
FA 2	P		dipen	Brazil	
FA 4	P		arjun	India	
FA 6	P		kshitij	Belrus	
FA 7	P		dipan	India	
FA 8	P		tapan	India	
FA 9	P		gaurav	India	
FA 10	P		vishal	India	
FA 11	P		monil	India	
FA 12	P		shreya	Belgium	
FA 13	P		a	Bahrain	

#### 6.4.2 Test Cases

Test Case No.	2
Test Case Action	Checks system behavior when credentials provided by admin are correct.
Input	Click on paidmember link by admin.
Expected output	Result page which contain information about only paid member.
Pass/Fail	Pass

Home	All Members	Paid Members	Members username and passwords	Statistics	Others
MemberID	Membership type		Username	Country	
FA1	P		Dharmesh	American Samoa	
FA2	P		dipen	Brazil	
FA4	P		ajun	India	
FA6	P		kshitij	Belrus	
FA7	P		dipan	India	
FA8	P		tapan	India	
FA9	P		gaurav	India	
FA10	P		vishal	India	
FA11	P		monil	India	
FA12	P		shreya	Belgium	
FA13	P		a	Bahrain	

#### 6.4.3 Test Cases

Test Case No.	3
Test Case Action	Checks system behavior when credentials provided by admin are correct.
Input	Click on statistic link by admin.
Expected output	Result page which contain total member, total male member, total female member, free member, paid member.
Pass/Fail	Pass

Home    All Members    Paid Members    Members username and passwords    Statistics    Others

 Site Statistics

<b>Total Members</b>	13
<b>Male</b>	12
<b>Female</b>	1
<b>Free Members</b>	2
<b>Paid Members</b>	11

#### 6.4.4 Test Cases

Test Case No.	4
Test Case Action	Checks system behavior when credentials provided by the user are correct.
Input	In Login page user enter correct credentials in respected text fields.
Expected output	User profile page.
Pass/Fail	Pass

*Success Story*

The quality of the proposals was a pleasant surprise, these were guys who were really serious about marriage. Though I received several decent proposals and met some of them, it clicked for me when I met Sudeep on your site. He was working in Boston while I was with my parents in Pune .

**Success Story**

The responses that I got, made me realize that I should have tried this a long time ago...

Specially after I added my photo... in the beginning, I didn't want to put it up on a website. But it seemed safe on Shaadi.com since I was given a password to keep it hidden until I was sure the person was serious about marriage. Then I received Karan's mail. We both clicked right away and got engaged on 12 Aug...

#### 6.4.7 Test Cases

Test Case No.	7
Test Case Action	Checks system behavior when credentials provided by the are correct.
Input	Click on details button for see more information about user .
Expected output	Redirect to the hide profile error message page if membership type of logged user is free type.
Pass/Fail	Pass

#### 6.4.8 Test Cases

Test Case No.	8
Test Case Action	Checks system behavior when credentials provided by user are correct.
Input	If user click on profile details button in result page of search.
Expected output	Redirect to the page which contain message like “ prolix has been hidden by profile owner”.
Pass/Fail	Pass

#### **6.4.9 Test Cases**

Test Case No.	9
Test Case Action	Checks system behavior when credentials provided by user are incorrect.
Input	User enters incorrect credentials in respected text fields of EmailId.
Expected output	Register page with message saying that credentials are incorrect..
Pass/Fail	Pass

#### **6.4.10 Test Cases**

Test Case No.	10
Test Case Action	Checks system behavior when credentials provided by the user are correct.
Input	In quick search page user enters required information for quick search.
Expected output	Display result according to match with information given by user.
Pass/Fail	Pass

#### 6.4.11 Test Cases

Test Case No.	20
Test Case Action	Checks system behavior when credentials provided by the user are correct.
Input	In wedding directory page user select correct category and city.
Expected output	Display result according to match with information given by user.
Pass/Fail	Pass

## **Chapter 7**

### **CONCLUSION AND FUTURE EXTENSION**

---

## 7.1 CONCLUSION

Matrimonial Web Application is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner.

Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match. There are different sectors like Registration, Partener , Search, etc. So the Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria. The Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfil their required criteria. It helps the user by providing profiles of perspective “Bride” or “Groom” and other information regarding them online.

Matrimonial web application provide facility like quick tour.this is a module that contains the flow of the website .Here user can have a idea how he can commit himself in the website.

Matrimonial web application provide facility to change preference about partner.

This application provide facility like edit profile, update photo and delete photo, hide profile, create album, send express interest, send personal message, apply for loan to the user.

## 7.2 FUTURE EXTENSIONS

- It is possible to provide the web space to the users for creating his portal.
- It is possible to create our own mail server.
- It is possible to create chat server so that user can communicate with each other.
- It is possible to provide facility like create video album.
